

Espai Artesà

El Llenyer

Al pati ens trobem un cobert adjacent on hui es situa l'ascensor i els lavabos, però que antigament s'utilitzava per acumular la llenya per al forn, a més d'altres objectes voluminosos, com bancs o posts de fusta per eixugar les peces.

Els forns s'escalfaven amb feixos de llenya i arbustos de la muntanya, gràcies a la seua recol·lecció netejaven la muntanya i el perill d'incendi era molt menor, donant feina a llenyaters, ofici extinguit en l'actualitat.

The woodshed

In the courtyard we find an adjacent shed where today is located the lift and toilets, but in the past this shed was used to collect firewood for the kiln, as well as other large objects, such as benches or wooden planks to dry the manufactured pieces.

The kilns were heated with bundles of firewood and mountain shrubs and thanks to its harvesting mountains were cleaned and fire hazard was lower, giving work to loggers, a trade extinguished today.
